## How Health Care in Illinois Has Changed<sup>b</sup>

### Top-Ranked Indicators

Uninsured children  
Employee insurance costs as a share of median income  
Suicide deaths

### Bottom-Ranked Indicators

Nursing home residents with an antipsychotic medication  
Hospital 30-day readmission rate age 65 and older  
Children without a medical and dental preventive care visit

### Most Improved Indicators

Nursing home residents with an antipsychotic medication  
Home health patients without improved mobility  
Diabetic adults without an annual hemoglobin A1c test

### Indicators That Worsened the Most

Children who are overweight or obese  
Preventable hospitalizations ages 18–64  
Children without a medical and dental preventive care visit

## Estimated Impact of State Improvement<sup>c</sup>

Top state in the U.S.	Top state in the Great Lakes region	Illinois could expect the following gains if performance in the state improved to the top level at these national and regional benchmarks:
520,197	229,498	more adults and children, beyond those who already gained coverage through the ACA, would be insured
388,373	97,093	fewer adults would skip needed care because of its cost
560,219	336,131	more adults would receive age- and gender-appropriate cancer screenings
30,960	17,692	more children (ages 19–35 months) would receive all recommended vaccines
3,905	2,165	fewer premature deaths (before age 75) would occur from causes that are potentially treatable or preventable with timely and appropriate care
278,497	10,383	fewer employer-insured adults and elderly Medicare beneficiaries would seek care in emergency departments for nonemergent or primary-care-treatable conditions

**Notes**

(a) The 2019 Scorecard rankings generally reflect 2017 data. The 2019 Scorecard added or revised several performance measures since the May 2018 Scorecard report; rankings are not comparable between reports. Rank change from the baseline period represents states' rank difference from the baseline data year (generally 2012 or 2013). Positive values represent an improvement in rank; negative values are a worsening in rank.

(b) Trend data available for 45 of 47 total Scorecard indicators. Improved/worsened denotes a change of at least one half (0.5) standard deviation larger than the indicator's distribution among all states over the two time points. No change denotes no change in rate or a change of less than one-half standard deviation.

(c) Estimated impact if this state's performance improved to the rate of two benchmark levels — a national benchmark set at the level of the best-performing state and a regional benchmark set at the level of the top-performing state in region ([www.bea.gov](http://www.bea.gov): Great Lakes, Mid-Atlantic, New England, Plains, Rocky Mountains, Southeast, Southwest, West). Benchmark states have an estimated impact of zero (0). Equivalent estimated impact based on national and regional benchmarks indicate that the best observed rate in the region was equal to the best observed rate nationally.

(d) Rates are for states' low income population, generally those whose household income is under 200% FPL.

(e) Disparity is the difference between the states' low-income and higher-income (400%+ FPL) populations.

(f) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates the low-income rate worsened and the disparity between low- and higher-income populations widened.
