How Health Care in Wyoming Has Changed^b

Top-Ranked Indicators

Central line-associated blood stream infection (CLABSI)
Colorectal cancer deaths
Breast cancer deaths

Bottom-Ranked Indicators

Diabetic adults without an annual hemoglobin A1c test
Children without all recommended vaccines
High out-of-pocket medical spending

Most Improved Indicators

Home health patients with a hospital admission
Breast cancer deaths
Central line-associated blood stream infection (CLABSI)

Indicators That Worsened the Most

Preventable hospitalizations ages 18–64
Children who did not receive needed mental health care
Hospital 30-day mortality

Estimated Impact of State Improvement^c

Top state in the U.S.	Top state in the Rocky Mountain region	Wyoming could expect the following gains if performance in the state improved to the top level at these national and regional benchmarks:
52,271	28,276	more adults and children, beyond those who already gained coverage through the ACA, would be insured
29,948	17,113	fewer adults would skip needed care because of its cost
40,758	20,379	more adults would receive age- and gender-appropriate cancer screenings
2,192	1,295	more children (ages 19–35 months) would receive all recommended vaccines
102	70	fewer premature deaths (before age 75) would occur from causes that are potentially treatable or preventable with timely and appropriate care
12,524	11,572	fewer employer-insured adults and elderly Medicare beneficiaries would seek care in emergency departments for nonemergent or primary-care-treatable conditions

Notes

(a) The 2019 Scorecard rankings generally reflect 2017 data. The 2019 Scorecard added or revised several performance measures since the May 2018 Scorecard report; rankings are not comparable between reports. Rank change from the baseline period represents states' rank difference from the baseline data year (generally 2012 or 2013). Positive values represent an improvement in rank; negative values are a worsening in rank.

(b) Trend data available for 45 of 47 total Scorecard indicators. Improved/worsened denotes a change of at least one half (0.5) standard deviation larger than the indicator's distribution among all states over the two time points. No change denotes no change in rate or a change of less than one-half standard deviation.

(c) Estimated impact if this state's performance improved to the rate of two benchmark levels — a national benchmark set at the level of the best-performing state and a regional benchmark set at the level of the top-performing state in region (www.bea.gov: Great Lakes, Mid-Atlantic, New England, Plains, Rocky Mountains, Southeast, Southwest, West). Benchmark states have an estimated impact of zero (0). Equivalent estimated impact based on national and regional benchmarks indicate that the best observed rate in the region was equal to the best observed rate nationally.

(d) Rates are for states' low income population, generally those whose household income is under 200% FPL.

(e) Disparity is the difference between the states' low-income and higher-income (400%+ FPL) populations.

(f) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates the low-income rate worsened and the disparity between low- and higher-income populations widened.
