How Health Care in Wyoming Has Changed^b

Top-Ranked Indicators

Central line-associated blood stream infection (CLABSI)
Adults with any mental illness reporting unmet need
Hospital 30-day readmission rate ages 18–64

Bottom-Ranked Indicators

Adults without all recommended cancer screenings
Suicide deaths
High out-of-pocket medical spending

Most Improved Indicators

Central line-associated blood stream infection (CLABSI)
Home health patients without improved mobility
Nursing home residents with an antipsychotic medication

Indicators That Worsened the Most

Adults with any mental illness who did not receive treatment
Breast cancer deaths
Hospital 30-day mortality

Estimated Impact of State Improvement^c

Top state in the U.S.	Top state in the Rocky Mountain region	Wyoming could expect the following gains if performance in the state improved to the top level at these national and regional benchmarks:
46,333	20,806	more adults and children would be insured
26,166	13,083	fewer adults would skip needed care because of its cost
43,834	18,049	more adults would receive age- and gender-appropriate cancer screenings
1,524	667	more children (ages 19–35 months) would receive all recommended vaccines
63	24	fewer premature deaths (before age 75) would occur from causes that are potentially treatable or preventable with timely and appropriate care
12,460	10,537	fewer employer-insured adults and elderly Medicare beneficiaries would seek care in emergency departments for nonemergent or primary-care-treatable conditions

Notes

(a) The 2020 Scorecard rankings generally reflect 2018 data. The 2020 Scorecard added or revised several performance measures since the June 2019 Scorecard report; rankings are not comparable between reports. Rank change from the baseline period represents states' rank difference from the baseline data year (generally 2013 or 2014). Positive values represent an improvement in rank; negative values are a worsening in rank.

(b) Trend data available for 43 of 49 total Scorecard indicators. Improved/worsened denotes a change of at least one-half (0.5) standard deviation larger than the indicator's distribution among all states over the two time points. No change denotes no change in rate or a change of less than one-half standard deviation.

(c) Estimated impact if this state's performance improved to the rate of two benchmark levels — a national benchmark set at the level of the best-performing state and a regional benchmark set at the level of the top-performing state in region (defined using Bureau of Economic Analysis (www.bea.gov) regions: Great Lakes, Mid-Atlantic, New England, Plains, Rocky Mountains, Southeast, Southwest, West). Benchmark states have an estimated impact of zero (0). Equivalent estimated impact based on national and regional benchmarks indicate that the best observed rate in the region was equal to the best observed rate nationally.

(d) Rates are for states' low-income population, generally those whose household income is under 200% of the federal poverty level (FPL).

(e) Income disparity is the difference between the states' low-income and higher-income (400%+ FPL) populations.

(f) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates the low-income rate worsened and the disparity between low- and higher-income populations widened.
