Using WhyNotTheBest.org to Explore Heath Care Performance Data for Hospitals, Hospital Groups, and Regions

Jaz-Michael King | jmking@ipro.us

Pellucid solves your problems

- **Joins data** reported for the same facility by different ID – no more figuring out which state ID matches which MPN/CMS Certification Number

- Attributes facilities to known **health care systems**

- Pre-calculates **numerous benchmarks** including state and national mean

- Assigns all measures to **geographical points** – map your data in a day

- **Facilities groupable** by ZIP, state, ownership, size

- Stores all data **historically** – create trending tables or charts of quality over time

- **Continually updated** using the latest available data

Pellucid data is used by...

- **Public reporting Web sites** download data in SQL format or plug it in directly from our servers and have your data refreshed automatically

- **Researchers** stop wasting time acquiring and reverse engineering data, just jump right into doing what you do best – analysis

- **Journalists** find out the top ten facilities for any given measure in seconds, not hours

- **Policy makers** map the data onto ZIP codes or counties and find out where the shortfalls are

- **Quality Improvement Organizations** use our data and tools to inform your public reporting providers

Pellucid includes…

- **CMS "Compare" data** including process of care, outcomes, infection, HACs and HCAHPS

- **AHRQ QI** data derived from 16 states' claims data

- **County Health Ranking** indicators

- **US Census Bureau** area data

- Select **BRFSS** and **ARF** data

- Demographic data on providers

Basic Structure

Entity + Measure + Date = Value

Reporting Entity: Physician, Physician Group, Hospital, Health System, MCO, ZIP, County, State, Average

Performance Measure: Process, Structure, Outcome, Survey, Reimbursement

Date: Data capture period
