How Health Care in Maine Has Changed^c

Top Ranked Indicators

Mentally ill adults who did not receive treatment

Adults without a usual source of care

Preventable hospitalizations, ages 18–64

Bottom Ranked Indicators

Suicide, alcohol, and drug use deaths

Adults who have lost six or more teeth

Avoidable emergency department visits, Medicare, age 65+

Most Improved Indicators

Home health patients without improved mobility

Nursing home residents with an antipsychotic drug

Mentally ill adults who did not receive treatment

Indicators That Worsened the Most

Home health patients with a hospital admission

Hospital 30-day mortality

Suicide, alcohol, and drug use deaths

Estimated Impact of State Improvement^d

| Top State in the U.S. | Top State in the Northeast | Maine could expect the following gains if performance in the state improved to the top level at these national and regional benchmarks: |
|-----------------------|----------------------------|--|
| 42,463 | 31,847 | fewer adults would skip needed care because of its cost |
| 29,273 | 29,273 | more adults would receive age- and gender-appropriate cancer screenings |
| 2,767 | 2,767 | more children (ages 19–35 months) would receive all recommended vaccines |
| 5,105 | 3,063 | fewer Medicare beneficiaries would receive an unsafe medication |
| 142 | 105 | fewer premature deaths (before age 75) would occur from causes that are potentially treatable or preventable with timely and appropriate care |
| 40,893 | 28,304 | fewer employer-insured adults and elderly Medicare beneficiaries would seek care in emergency departments for nonemergent or primary-care-treatable conditions |

Notes. (a) The 2018 Scorecard rankings reflect 2015 or 2016 data. The 2018 Scorecard added or revised several performance measures since the March 2017 Scorecard report; rankings are not comparable between reports. (b) Change represents states' rank difference from the baseline data year (generally 2012 or 2013). Positive values represent an improvement in rank; negative values are a worsening in rank. (c) Trend data available for 37 of 43 total Scorecard indicators. Greatly improved/worsened denotes a change of at least one full (1.0) standard deviation larger than the indicator's distribution among all states over the two time points; improved/worsened denotes a change of at least one-half (0.5) standard deviation. No change denotes no change in rate or a change of less than one-half standard deviation. (d) Estimated impact if this state's performance improved to the rate of two benchmark levels—a national benchmark set at the level of the best-performing state and a regional benchmark set at the level of the top performing state in same census region (Midwest, Northeast, South, or West). Benchmark states have an estimated impact of zero (0). Equivalent estimated impact based on national and regional benchmarks indicate that the best observed rate in the region was equal to the best observed rate nationally. Impact based on national and regional benchmarks should not be interpreted as cumulative. (e) Change (improvement or worsening) refers to a change between the baseline and current time periods of at least 0.5 standard deviations. (f) Rates are for the states' low income population, generally those whose household income is under 200% FPL. (g) Disparity is the difference between the states' low-income and higher-income (400%+ FPL) populations. (h) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates the low-income rate worsened and the disparity between low- and higher-income populations widened.
