How Health Care in Washington Has Changed^c

Top Ranked Indicators

- Preventable hospitalizations, ages 18–64
- Diabetic adults without a HbA1C test
- Hospital admissions for pediatric asthma

Bottom Ranked Indicators

- Children without a medical home
- Mentally ill adults reporting unmet need
- Hospital 30-day mortality

Most Improved Indicators

- Home health patients without improved mobility
- Uninsured adults
- Uninsured children

Indicators That Worsened the Most

- Avoidable emergency department visits, Medicare, age 65+
- Hospital 30-day mortality
- Employee insurance costs as a share of median income

Estimated Impact of State Improvement^d

Top State in the U.S.	Top State in the West	Washington could expect the following gains if performance in the state improved to the top level at these national and regional benchmarks:
170,182	170,182	fewer adults would skip needed care because of its cost
232,844	166,558	more adults would receive age- and gender-appropriate cancer screenings
12,360	817	more children (ages 19–35 months) would receive all recommended vaccines
14,915	8,949	fewer Medicare beneficiaries would receive an unsafe medication
530	117	fewer premature deaths (before age 75) would occur from causes that are potentially treatable or preventable with timely and appropriate care
22,419	22,419	fewer employer-insured adults and elderly Medicare beneficiaries would seek care in emergency departments for nonemergent or primary-care-treatable conditions

Notes. (a) The 2018 Scorecard rankings reflect 2015 or 2016 data. The 2018 Scorecard added or revised several performance measures since the March 2017 Scorecard report; rankings are not comparable between reports. (b) Change represents states' rank difference from the baseline data year (generally 2012 or 2013). Positive values represent an improvement in rank; negative values are a worsening in rank. (c) Trend data available for 37 of 43 total Scorecard indicators. Greatly improved/worsened denotes a change of at least one full (1.0) standard deviation larger than the indicator's distribution among all states over the two time points; improved/worsened denotes a change of at least one-half (0.5) standard deviation. No change denotes no change in rate or a change of less than one-half standard deviation. (d) Estimated impact if this state's performance improved to the rate of two benchmark levels—a national benchmark set at the level of the best-performing state and a regional benchmark set at the level of the top performing state in same census region (Midwest, Northeast, South, or West). Benchmark states have an estimated impact of zero (0). Equivalent estimated impact based on national and regional benchmarks indicate that the best observed rate in the region was equal to the best observed rate nationally. Impact based on national and regional benchmarks should not be interpreted as cumulative. (e) Change (improvement or worsening) refers to a change between the baseline and current time periods of at least 0.5 standard deviations. (f) Rates are for the states' low income population, generally those whose household income is under 200% FPL. (g) Disparity is the difference between the states' low-income and higher-income (400%+ FPL) populations. (h) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates the low-income rate worsened and the disparity between low- and higher-income populations widened.
