SUMMARY OF STUDY METHODS

To project federal funding losses for every state and the District of Columbia, we used the most recent data from the U.S. Department of Health and Human Services to estimate baseline 2016 federal expenditures for premium tax credits and federal Medicaid expansion funding. Federal funding losses from calendar years 2019 to 2023 were based on Congressional Budget Office (CBO) baseline projections. To be conservative, we did not include projections related to the Affordable Care Act's marketplace cost-sharing reductions or the potential loss of coverage for those already eligible for Medicaid.

State- and year-specific federal funding losses were input into the PI+ (version 2.0) economic forecasting model, developed by Regional Economic Models, Inc. PI+ is a dynamic structural equation model that projects state-level economic and employment forecasts. The model includes elements of input-output, general economic equilibrium, econometric, and economic geography methodologies. The estimated effects are based on differences between a baseline model (control forecast) and models assuming policy changes—in this case, the loss of premium tax credits or federal Medicaid expansion funding. The multiregion model accounts for the flow of funds and goods both within and across states. Most health care is local; patients generally use clinics, hospitals, and pharmacies near their home, but health care income eventually translates into purchases of diverse goods and services, so that funds originating in one state eventually flow across state lines into the interstate economy. We estimate state-level changes in the following measures by calendar year:

- 1. **Employment**: Number of full- or part-time jobs that could be added or lost in each state, including private health care, construction, real estate, retail, finance, and insurance jobs and public-sector employment.
- 2. Business output: Equivalent to the sum of all transactions at production, wholesale, and retail levels in a state.
- **3. Gross state product (GSP):** Net value added within a state. It is the state-level analogue to the gross domestic product for the nation.
- 4. State and local tax revenue: State and local income, sales, and other taxes.

Business output, GSP, and state and local tax revenues are measured in current (nominal) dollars for their respective calendar years.

Study Limitations

All projections entail uncertainty. The health care market and the general economy are ever changing. We focus solely on the effects of revoking premium tax credits and Medicaid expansions. If cancellation dates for tax credits or Medicaid expansion are shifted up or down by one year, results should be similar but moved forward or backward in time.

Given current legislative uncertainties, we are unable to account for potential Affordable Care Act replacement policies or other economic policy changes. A recent analysis of the economic effects in California assumed changes in health-related taxes and reached conclusions that were consistent with the national analyses reported here. In an analysis like this, an important question is whether the federal funding that is cut would be used for another purpose; this is also unclear. CBO estimated that H.R. 3762 could have reduced the federal deficit, but alternative uses for these savings were not specified. It did not appear that the federal savings would be rechanneled to help states or support health care. Updated analyses may be possible in the future. The study also did not explicitly model the effects of other provisions that might be considered, such as elimination of some taxes and penalties. However, the California study suggests that the effect of these changes on employment would be modest.

A complete description of this study's methods and data sources is available in the full version of this analysis, *The Economic and Employment Consequences of Repealing Federal Health Reform:* A 50 State Analysis, available at https://publichealth.gwu.edu/sites/default/files/downloads/HPM/Repealing_Federal_Health_Reform.pdf.
