Chartpack

National Scorecard on U.S. Health System Performance, 2011

This Chartpack presents data for all indicators scored in the National Scorecard on U.S. Health System Performance, 2011. Charts display average performance for the United States as a whole and the range of performance found within the U.S. or compared with other countries.
Scores: Dimensions of a High Performance Health System

SECTION 1. HEALTHY LIVES

Scored Indicators:

1. Mortality amenable to health care
2. Infant mortality
3. Healthy life expectancy at age 60
4. Adults ages 18–64 limited in any activities because of health problems
5. Children ages 6–17 who missed 11 or more days of school because of illness or injury
6. Adults who smoke*
7. Children ages 10–17 who are overweight or obese*

* Indicators are new to 2011 edition of the National Scorecard.

SECTION 2. QUALITY

Quality includes indicators organized into four groups:

1. Effective care
2. Coordinated care
3. Safe care
4. Patient-centered, timely care

The Scorecard scores each group of indicators separately, and then averages the four scores to create the overall score for Quality.
Effective Care

Scored Indicators:

1. Adults received recommended screening and preventive care
2. Children received recommended immunizations and preventive care
   • Received all recommended doses of six key vaccines
   • Received both preventive medical and dental care visits
3. Adults and children needed mental health care and received treatment
   • Adults with major depressive episode who received treatment
   • Children needed mental health care and received treatment
4. Chronic disease under control
   • Adults with diabetes whose hemoglobin A1c level <9%
   • Adults with hypertension whose blood pressure <140/90 mmHg
5. Hospitalized patients received recommended care for heart attack, heart failure, and pneumonia
6. Surgical patients received appropriate care to prevent complications*

* Indicator is new to 2011 edition of the National Scorecard.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Receipt of Recommended Screening and Preventive Care for Adults

Percent of adults age 18+ who received all recommended screening and preventive care within a specific time frame given their age and sex*

Coordinated Care

Scored Indicators:

1. Adults ages 19–64 with an accessible primary care provider
2. Children with a medical home
3. Care coordination at hospital discharge
   • Hospitalized patients with new Rx: Medications were reviewed at discharge
   • Heart failure patients received written instructions at discharge
   • Health plan members age 6 and older received follow-up within 30 days after hospitalization for mental health disorder
4. Nursing homes: hospital admissions and readmissions
5. Home health care: hospital admissions

Home Health Care: Hospital Admissions

Percent of home health care patients who had to be admitted to the hospital

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Safe Care

Scored Indicators:

1. Medical, medication, or lab test error
2. Unsafe drug use
   • Children prescribed antibiotics for throat infection without a “strep” test
   • Use of high-risk medication among elderly Medicare beneficiaries*
   • Potentially harmful drug–disease interactions among elderly Medicare beneficiaries*
3. Nursing home residents with pressure sores
4. Hospital-standardized mortality ratios
5. 30-day hospital mortality rates for heart attack, heart failure, and pneumonia*

Other Indicator:

1. Preventable adverse events and other complications of hospital care

* Indicators are new to 2011 edition of the National Scorecard.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Sicker adults met at least one of the following criteria: health is fair or poor; serious illness in past two years; or was hospitalized or had major surgery in past two years. Patient-Centered, Timely Care

Scored Indicators:

1. Able to see doctor on same or next day when sick or need medical attention
2. Very or somewhat easy to get care after hours without going to the emergency room
3. Doctor–patient communication: doctor always listened carefully, explained things clearly, respected what they had to say, and spent enough time
4. Adults with chronic conditions given self-management plan
5. Patient-centered hospital care
6. Home health care patients whose ability to walk or move around improved*

Other Indicator:

1. Physical restraints in nursing homes

* Indicator is new to 2011 edition of the National Scorecard.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Sicker adults met at least one of the following criteria: health is fair or poor; serious illness in past two years; or was hospitalized or had major surgery in past two years. AUS=Australia; CAN=Canada; FRA=France; GER=Germany; NETH=Netherlands; NZ=New Zealand; UK=United Kingdom; US=United States.

Data: 2008 Commonwealth Fund International Health Policy Survey.

Adults with Chronic Conditions Who Received Self-Management Plan, Among Sicker Adults, 2008

Percent of adults with chronic conditions* whose doctor gave plan to manage care at home

* Adult reported at least one of six conditions: hypertension, heart disease, diabetes, arthritis, lung problems (asthma, emphysema, etc.), or depression.
Sicker adults met at least one of the following criteria: health is fair or poor; serious illness in past two years; or was hospitalized or had major surgery in past two years. AUS=Australia; CAN=Canada; FRA=France; GER=Germany; NETH=Netherlands; NZ=New Zealand; UK=United Kingdom; US=United States.
Data: 2008 Commonwealth Fund International Health Policy Survey.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Patient-Centered Hospital Care: Staff Managed Pain, Responded When Needed Help, and Explained Medicines, by Hospitals, 2009

Percent of patients reported “always”

- Patient’s pain was well controlled and hospital staff did everything to help with pain.
- Patient got help as soon as wanted after patient pressed call button and in getting to the bathroom/using bedpan.
- Hospital staff told patient what medicine was for and described possible side effects in a way that patient could understand.

Data: IPRO analysis of HCAHPS from CMS Hospital Compare.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Home Health Care: Ability to Walk

Percent of home health care patients whose ability to walk or move around improved

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Physical Restraints in Nursing Facilities

Percent of nursing home residents who were physically restrained

U.S. average and state distribution

By race/ethnicity

PI=Pacific Islander; AI/AN=American Indian or Alaskan Native.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
SECTION 3. ACCESS

Access includes indicators organized into two groups:

1. Participation
2. Affordability

The Scorecard scores each group of indicators separately, and then averages the two scores to create the overall score for Access.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Participation

Scored Indicators:
1. Adults ages 19–64 insured all year, not underinsured
2. Adults with no access problem because of costs

Other Indicators:
1. Uninsured under age 65: trends
2. Percent of adults ages 19–64 uninsured by state (map)
3. Percent of children ages 0–18 uninsured by state (map)
4. Post-reform: projected percent of adults ages 19–64 uninsured by state (map)

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Uninsured and Underinsured Adults

Percent of adults ages 19–64 who are uninsured or underinsured

- **Underinsured*:**
  - 2003: 9
  - 2007: 14
  - 2010: 16

- **Uninsured during year:**
  - 2003: 26
  - 2007: 28
  - 2010: 28

**Millions of adults ages 19–64 who are uninsured or underinsured, 2010**

- **Insured all year, not underinsured:** 52
- **Underinsured*:** 29
- **Uninsured during year:** 102

**Total: 184 million**

* Underinsured defined as insured all year but experienced one of the following: medical expenses equaled 10% or more of income; medical expenses equaled 5% or more of income if low-income (<200% of poverty); or deductibles equaled 5% or more of income.

** Subgroups may not sum to total because of rounding.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Access Problems Because of Costs, 2010

Percent of adults who had any of three access problems* in past year because of costs

* Did not get medical care because of cost of doctor’s visit; skipped medical test, treatment, or follow-up because of cost; or did not fill Rx or skipped doses because of cost.

AUS=Australia; CAN=Canada; FRA=France; GER=Germany; NETH=Netherlands; NZ=New Zealand; NOR=Norway; SWE=Sweden; SWIZ=Switzerland; UK=United Kingdom; US=United States.

Data: 2010 Commonwealth Fund International Health Policy Survey.

Affordable Care

Scored Indicators:

1. Persons under age 65 living in families with low out-of-pocket spending for medical care and premiums relative to family income

2. Persons under age 65 living in states where premiums for employer-sponsored health coverage are less than 15 percent of under-65 median household income

3. Adults ages 19–64 with no medical bill problems or medical debt

Other Indicator:

1. Health insurance premium trends compared with workers’ earnings and overall inflation

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Financial Burden from Health Care Spending: High Out-of-Pocket Medical and Premium Costs Relative to Income

Percent of people under age 65 living in families with high out-of-pocket medical and premium costs relative to family income*

* Defined as having combined out-of-pocket expenses for services and premiums greater than 5 percent for people in families with incomes less than 200% of poverty, and out-of-pocket expenses greater than 10 percent for people in families with incomes of 200% of poverty or higher.

^ Poor refers to household incomes <100% of federal poverty level (FPL); low income to 100%–199% FPL; middle income to 200%–399% FPL; and high income to 400%+ FPL.

Data: P. Cunningham, Center for Studying Health System Change analysis of Medical Expenditure Panel Survey.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Employer Premiums as Percentage of Median Household Income for Population Under Age 65

**Average total premium for employer-based single and family coverage**

- **2003**
  - Single: $3,481
  - Family: $4,669

- **2005**
  - Single: $3,991
  - Family: $9,249

- **2009**
  - Single: $10,728
  - Family: $13,027

**Under-65 population living in states where premiums as share of median household income are within the following ranges**

- **Premium 18%+ of income**
  - 2003: 9
  - 2005: 35
  - 2009: 67

- **Premium 15%–17.9% of income**
  - 2003: 55
  - 2005: 60
  - 2009: 29

- **Premium 12%–14.9% of income**
  - 2003: 2
  - 2005: 21
  - 2009: 4

- **Premium <12% of income**
  - 2003: 0%
  - 2005: 0%
  - 2009: 0%

SECTION 4. EFFICIENCY

Scored Indicators:

1. Potential overuse or waste
   - Duplicate medical tests
   - Tests results or records not available at appointment
   - Potentially inappropriate imaging for low back pain

2. Emergency room use for condition that could have been treated by regular doctor

3. Potentially preventable hospitalizations for ambulatory care–sensitive conditions

4. Medicare hospital 30-day readmission rates

5. Medicare costs of care and mortality for heart attacks, hip fractures, or colon cancer

6. Medicare costs of care for beneficiaries with multiple chronic diseases

7. Health insurance administration as percent of total national health expenditures

8. Use of electronic medical records
   - Primary care physicians using electronic medical records
   - Hospitalized patients received care in a hospital with basic or comprehensive electronic health record system*

* Indicator is new to 2011 edition of the National Scorecard.

* NHE = national health expenditures; ** PPP = purchasing power parity.

\(^a\) 2008.

\(^b\) Includes claims administration, underwriting, marketing, profits, and other administrative costs; based on premiums minus claims expenses for private insurance.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Use of Electronic Medical Records

Percent of primary care physicians using electronic medical records

AUS=Australia; CAN=Canada; FRA=France; GER=Germany; ITA=Italy; NETH=Netherlands; NZ=New Zealand; NOR=Norway; SWE=Sweden; UK=United Kingdom.

Data: Commonwealth Fund International Health Policy Survey of Physicians.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Adoption of Comprehensive and Basic Electronic Record Systems, 2009

Percent of hospitalized patients received care in hospitals with basic, comprehensive, or no electronic record system

- Basic*
- Comprehensive**
- None

* Basic electronic record system defined as having 10 functions deployed in at least one hospital unit. See Appendix B for a description of electronic functionalities.

** Comprehensive electronic record system defined as having 24 functions deployed in all hospital units.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
For equity, the Scorecard contrasts rates of risk by insurance, income, and race/ethnicity. Specifically, the risk ratios compare:

- Insured to uninsured rates
- High-income to low-income rates
- White to black rates
- White to Hispanic rates

Indicators used to score equity include a subset of main indicators and a few equity-only indicators to highlight certain areas of concern. They are grouped as follows:

- Healthy lives
- Effective care
- Safe care
- Patient-centered, timely care
- Coordinated and efficient care
- Universal participation and affordable care

Charts for equity indicators are interspersed throughout other sections as appropriate.
Infant Mortality

Infant deaths per 1,000 live births

By race/ethnicity, 1995–2007

Preterm-related infant deaths by race and Hispanic origin, 2007

^ Denotes years in 2006 and 2008 National Scorecards. PI=Pacific Islander; AI/AN=American Indian or Alaskan Native.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Working-Age Adults Limited in Activities Because of Health Problems, 2010

Percent of adults limited in any activities because of physical, mental, or emotional problems

By family income

- $50,000+
- $25,000–$49,000
- <$25,000

By insurance status

- Insured
- Uninsured

Data: D. Belloff, Rutgers Center for State Health Policy, and D. Radley, analysis of Behavioral Risk Factor Surveillance System.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Coronary Heart Disease and Diabetes-Related Mortality, by Race/Ethnicity and Education Level, 2006

Age-adjusted mortality per 100,000 population

Coronary heart disease mortality

Diabetes-related mortality

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Receipt of Recommended Preventive Care for Older Adults, by Race/Ethnicity, Family Income, and Insurance Status, 2008

Percent of older adults who received all recommended screening and preventive care within a specific time frame given their age and sex*

* Recommended care includes at least six key screening and preventive services: blood pressure, cholesterol, Pap, mammogram, fecal occult blood test or sigmoidoscopy/colonoscopy, and flu shot. See report Appendix B for complete description.

Data: N. Tilipman, Columbia University analysis of Medical Expenditure Panel Survey.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Untreated Dental Caries, by Age, Race/Ethnicity, Family Income, and Insurance Status, 2005–2008

Percent of people with untreated dental caries

Data: Race/ethnicity—National Health and Nutrition Examination Survey (NCHS 2011); Total, income, and insurance—J. M. McWilliams, Harvard Medical School analysis of National Health and Nutrition Examination Survey.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
EQUITY: EFFECTIVE CARE

Adults with Poorly Controlled Chronic Diseases, by Race/Ethnicity, Family Income, and Insurance Status, 2005–2008

Percent of adults age 18+ with diagnosed diabetes with hemoglobin A1c level ≥9%

Percent of adults age 18+ with hypertension with blood pressure ≥140/90 mmHg

* High refers to household incomes >400% of federal poverty level (FPL); middle to 200%–399% FPL; near poor to 100%–199% FPL; and poor to <100% FPL.

Data: J. M. McWilliams, Harvard Medical School analysis of National Health and Nutrition Examination Survey.

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Receipt of All Three Recommended Services for Diabetics, by Race/Ethnicity, Family Income, Insurance, and Residence, 2007

Percent of diabetics age 40 and older who received hemoglobin A1c test, retinal exam, and foot exam in past year

- **Total**: 37%
- **White**: 42%
- **Black**: 32%
- **Hispanic**: 27%
- **400%+ of poverty**: 51%
- **200%–399% of poverty**: 33%
- **100%–199% of poverty**: 29%
- **<100% of poverty**: 23%
- **Private***: 42%
- **Uninsured***: 22%
- **Metropolitan**: 38%
- **Nonmetropolitan**: 35%

* Insurance for people ages 40–64.

Data: Medical Expenditure Panel Survey (AHRQ 2010).

Source: Commonwealth Fund National Scorecard on U.S. Health System Performance, 2011.
Medical, Medication, and Lab Errors, by Race/Ethnicity, Income, and Insurance Status, Among Sicker Adults, 2008

Percent of adults ages 18–64 who reported medical mistake, medication error, or lab error in past two years

Sicker adults met at least one of the following criteria: health is fair or poor; serious illness in past two years; or was hospitalized or had major surgery in past two years.

Data: 2008 Commonwealth Fund International Health Policy Survey.
