

Snapshot of health system climate
vulnerability and performance in...

New Hampshire

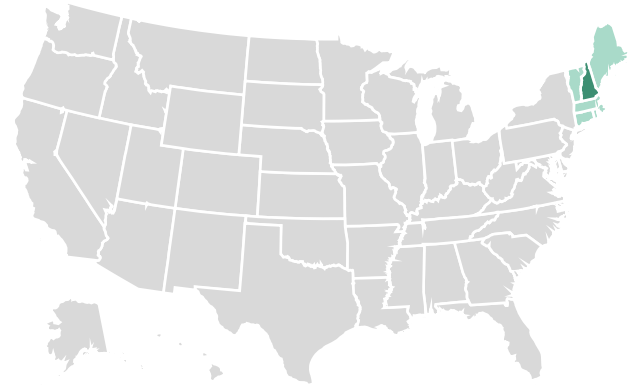

The
Commonwealth
Fund

New Hampshire ranks #12 overall.

New Hampshire ranks #4 in the New England region.

	National Rank	Rank Among New England States*
Average Annual Air Quality Index	10 of 51	3 of 6
Health Risk from Extreme Heat	5	1
Health Care Facility Risk from Natural Hazards	17	6
Health Care Facility Flood Risk	46	6
State Energy Efficiency Policy	19	6
State Electricity Emissions and Their Health Impact	5	2
Health Care Sector Greenhouse Gas (GHG) Emissions	14	2
Health Care Worker Commuting Emissions	31	4

*Note: New England region includes CT, ME, MA, NH, RI, VT.

How New Hampshire Compares to All States

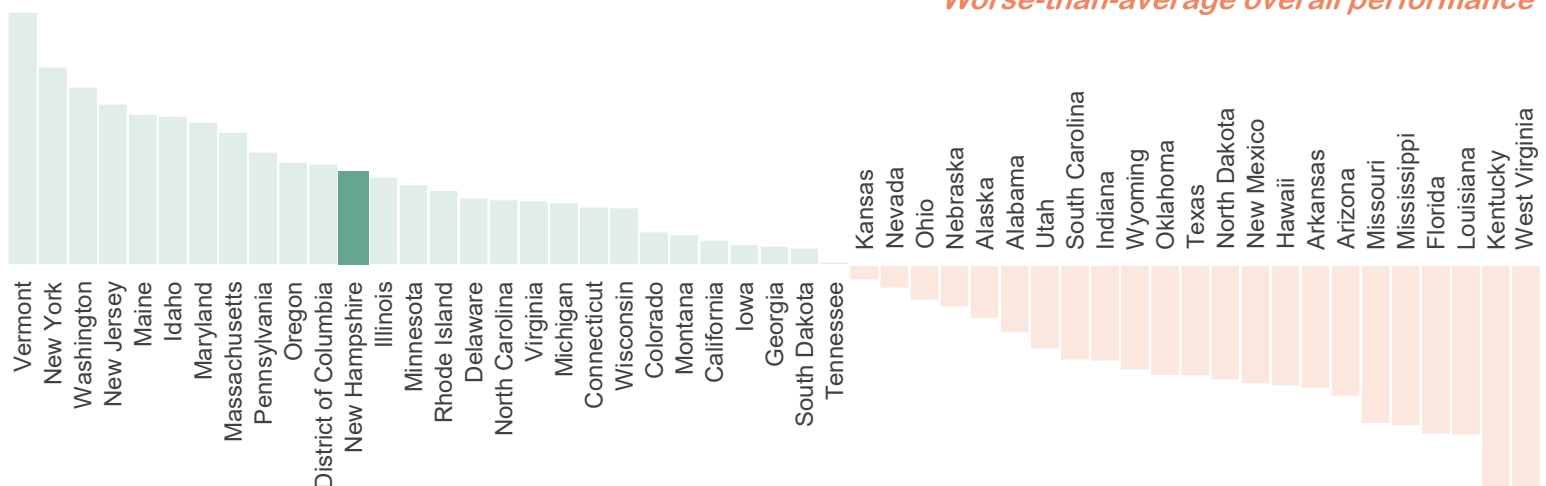

Table 1. Indicators of State Health System Climate Vulnerability and Performance

Indicator	Data year	State rate	U.S. average	State rank
Average Annual Air Quality Index Scale of 0–500, with values below 100 generally considered good/moderate air quality	2022	37	42	10
Health Risk from Extreme Heat CDC/ATSDR ^a Heat and Health Index (0–1), with 1 indicating greatest risk	2024	0.41	0.51	5
Health Care Facility Risk from Natural Hazards FEMA ^b National Risk Index (0–100), with 100 indicating greatest risk	2023	43	54	17
Health Care Facility Flood Risk Percent of inpatient facility beds in high-hazard flood zones	2023	6.5%	2.5%	46
State Energy Efficiency Policy ACEEE ^c Energy Efficiency Scorecard (0–50), with 50 indicating best performance	2022	20	17	19
State Electricity Emissions and Their Health Impact Health impact per unit of electricity generated, ^d where lower values indicate less health impact from emissions	2021	0.144	0.464	5
Health Care Sector Greenhouse Gas (GHG) Emissions Kilograms of carbon dioxide equivalent (kg CO ₂ e) ^e	2020	1,095	1,362	14
Health Care Worker Commuting Emissions Transportation-related GHG emissions from health care facility employee commuting (kg CO ₂ e per employee)	2022	2,243	2,169	31

New Hampshire ranked best on:

Health Risk from Extreme Heat

People in New Hampshire are less likely to experience negative health impacts from extreme heat than residents of other states. This indicator covers sociodemographic and environmental factors in addition to historical heat exposure, given that people don't experience extreme heat equally.

New Hampshire ranked worst on:

Health Care Facility Flood Risk

Compared to other states, New Hampshire has a larger proportion of inpatient facility beds in high-hazard flood zones.

Notes: (–) Indicates missing data. (a) Centers for Disease Control/Agency for Toxic Substances and Disease Registry (CDC/ATSDR). (b) Federal Emergency Management Agency (FEMA). (c) American Council for an Energy-Efficient Economy (ACEEE). (d) Measured in Disability-Adjusted Life Years (DALYs) per gigawatt-hour (GWh) of electricity generated; DALYs are a common measure of the burden of disease, representing years of healthy life lost. (e) Kilograms of CO₂e stands for “carbon dioxide equivalent,” a standard measure of the warming effect of greenhouse gases.
