

# Health Disparities for Hispanic People in the United States

## Overall State Health System Performance for Hispanic People

Health system performance expressed as 1–100 percentiles, based on five racial and ethnic groups in each state. Higher scores reflect better performance, and vertical center line is median performance among all groups. Highlighted point is state's health system performance for Hispanic people; grey point is highest score for any group in the state. States only have an overall score when there are sufficient data for all three domains: health outcomes, access, and quality. Scores for Hispanic ethnicity not available for: TN and VT.
